PROJECT NO. CA0160	Rail Station Car Parking Consultancy	27/05/2016	As part of the West Yorkshire Plus Transport Fund, a package of car park extensions at rail stations has been identified to enhance connectivity to, from and within West Yorkshire. The purpose of the package is to increase car parking capacity at selected stations. It will deliver more localised benefits as a result of improved access to the rail network. The package is designed to support sustainable employment growth in the main urban centres and will particularly benefit commuters, but also support more travel into and between the urban centres by rail for other purposes. The original mandate comprised of sites predominantly owned by Network Rail to reduce the need for acquisition costs and facilitate the incorporation of operations and maintenance into the station lease area. However the availability of land owned by Network Rail is limited, the demand for car parking at rail stations is increasing and requests to create car park extensions on 3rd party land options are being received. The requirement of this work is to review potential car park extension options on any land adjacent to and within an 800 metre radius of all West Yorkshire's rail stations.
